DETAILED ACTION

Election/Restrictions

- 1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - Claims 1-5, drawn to a resin recycling system, classified in class 264, subclass 37.1+.
 - II. Claims 6-8, drawn to crusher, classified in class 241, subclass 200.
 - III. Claims 9-11, drawn to an identification device, classified in class 356, subclass 237.1+.
 - IV. Claims 12-15, drawn to a method of cleaning a thermoplastic resinous products, classified in class 134, subclass 16.
 - V. Claims 16-17, drawn to a device for cleaning a thermoplastic resinous product, classified in class 134, subclass 133.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions of Group I and Group II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the resin recycling system as instantly claimed although recites crushing means, but does not

Art Unit: 1746

require the particularities of the crusher, such as endless conveyor and an opposed member, or distance determination mechanism, as presented in group II. The subcombination has separate utility such as a granulating device or a device for producing powders and /or smaller size particles for packaging.

- 3. Inventions of Group I and Group III are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the resin recycling system although recites the classification means does not recite the particularities of an identification device and its specific arrangement as claimed in claim 9. The subcombination has separate utility such as a device for determination of "fish eyes" or "foreign bodies" in polymer molded articles.
- 4. Inventions of Group I and Group V are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the resin

Art Unit: 1746

recycling system as instantly claimed although recites cleaning means, but does not require the particularities of cleaning device, such as a rotary body, a water supply port, a drainage line and roughened agitating blades, as presented in Group V. The subcombination has separate utility such as a mixer for producing polymer suspensions.

- 5. Inventions of Groups I, V and Group IV are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case the process as claimed can be performed in a materially different apparatus, such as for example extractor with organic solvents to remove residual monomers or just in a stirred mixing reactor to agitate the cleaning liquid and resinous products to be cleaned in order to achieve better contact and therefore better cleaning.
- 6. Inventions of Groups III and Group IV are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions are identification device, and a method of cleaning. The cleaning process per se is performed without the use of identification device and requires the steps of crushing and rotating the crushed pieces in a rotary body. The identification device per se comprises distance determination

Art Unit: 1746

mechanism, sensor and light irradiating means. Therefore, the claimed inventions have different modes of operation, different functions and produce different effects.

Page 5

- 7. Inventions of Groups II and Group IV are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case the process as claimed can be performed in a materially different apparatus, such as for example extractor with organic solvents to remove residual monomers, which does not require the use of crushing device.
- 8. Inventions of Group II and Group III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, the crusher and an identification device are shown as separately usable during the different stages of resin recycling system and the invention of Group III has separate utility such as a device for registration the end point of chemical reaction. See MPEP § 806.05(d).
- 9. Inventions of Groups II and Group V are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, the crusher and the cleaning device are shown as separately usable during the different stages of resin

recycling system and the invention of Group V has separate utility such as a mixer for producing polymer suspensions. See MPEP § 806.05(d).

Page 6

- 10. Inventions of Group III and Group V are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, the identification device and the cleaning device are shown as separately usable during the different stages of resin recycling system and the invention of Group V has separate utility such as a mixer for producing polymer suspensions. See MPEP § 806.05(d).
- 11. Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II-V, restriction for examination purposes as indicated is proper.
- 12. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.
- 13. A telephone call was made to Mr. J. Kruger, esq., on o4/07/2003 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

10. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Michael Kornakov whose telephone number is (703) 305-0400. The examiner can normally be reached on 9:00am - 5:30pm.

a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Randy Gulakowski can be reached on (703) 308-4333. The fax phone numbers for the organization where this application or proceeding is assigned are (703) 872 9310 for regular communications and (703) 872 9311 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703) 308 2450.
